

Is Planet-X Actually A Brown Dwarf Star In Disguise?

By

Dr Jaysen Rand, Ph.D.

Until the subject of Planet-X became an Internet phenomenon in the early 90s with literally thousands of competing websites-"X" was simply the equivalent of comic-book-like humor and fanciful Sci-Fi fodder for Hollywood producing a potential mega-million dollar blockbuster.

But all that's changed now with dozens of fascinating books, beautiful illustrations, pro and con website commentaries and global blogs, scientific and astronomical arguments, secret NASA space probes and expensive global observatory research projects, a most revealing New York Times news article (1982)-and the list goes on and on and on...

Our new hit-bound book, *The Return Of Planet-X*, examines this cosmic mystery from inside the phenomenology itself. As our tome points out-some of us believe that "X" is known as the Biblical death star "Wormwood" - mentioned in the Christian Bible's Book Of Revelation...

"And the name of the star was Wormwood" -Chap. 8, Verse 11

Given this context and researching the known data at hand-we came to the conclusion that Planet-X (as it is commonly referred to) is most likely a large glowing failed brown dwarf star.

Let's begin by auditing what the Random House Webster Collegiate Dictionary tells us about brown dwarf stars. Quoting them: "A brown dwarf star is a cold dark star that is too small to initiate the nuclear reactions that generate heat and light."

I suppose that we could stand on that particular scientific description of what a brown dwarf star should be, but I believe brown dwarfs come in more varieties, sizes, masses and descriptions than the one found in 'that' dictionary. So, let's take a brief look into this theory.

As the subject of our codex-we believe that "X" -this one particular brown dwarf, the one we believe is the Book of Revelation's-Wormwood, is in fact, an un-ignited celestial body that we suspect has at least a mass matching the planet Saturn. Our research also indicates that this particular brown dwarf may also have been a 'sister star' to our own sun- and for whatever reasons (in the early beginnings of the solar system - formed itself into its present condition as a failed brown dwarf following the evolution of the other planets in our star system after a billion or more years of natural cosmic transformation-a period of about 4.5 to 5 billion years.

There are a lot of unanswered questions and major challenges to the "X" subject posed by professional and amateur astronomers alike about why we haven't seen any reliable scientific evidence or sightings of this rogue celestial body! And no doubt we could

Brown Dwarf Star: This image shows what it might look like standing on the surface of a planet orbiting a brown dwarf star. An alien moon can also be seen in the sky. The brown dwarf gives off such feeble visible light it is difficult to see any of the landscape except for the reflection in the water.

probably spend several hours discussing a variety of 'their' particular "X" issues and questions, but rather than get us bogged down in a discussion of this nature, let's examine what we understand are some commonly understood principles regarding the nature of brown dwarf stars-what they are-and what they're not!

Part of our discussion centers around our working hypothesis that this particular brown dwarf was kicked out of its original solar system trajectory into a vast elliptical-shaped orbit possibly taking as much as 3,600 - 4,000 years to complete its arcane journey through the heavens. Seemingly celestial objects like a brown dwarf that are in true orbit around the sun would appear to be moving relatively slowly, similar to the speeds of normal planets and under normal conditions should be detectable many years in advance, even by amateur astronomers.

But there is something radically different about this one particular brown dwarf body. Such an object should not violate Kepler's Laws of Motion, if it was a natural object. Any new giant gas planet or brown dwarf star should be easily spotted by thousands of avid comet hunters and stargazers out there and they are located everywhere in the world without reservation, degree or false motivation.

Comets, for instance, once they are spotted, are usually adjudged mere miles across. Part of the mystery involved in our six years of research appears to be the fact that this one object, if it were approaching the brightness of Saturn, if not Jupiter, and, if it was at that close a distance even now regardless of its orientation to the solar system should be reflecting light, not glowing. We believe that this brown dwarf (Planet-X) may be a glowing body, however much lower in intensity and mass compared to our sun. We may in fact, be dealing with a celestial phenomenon possibly not a true brown dwarf, but more possibly an UNNATURAL/UNKNOWN CELESTIAL OBJECT - in this case one that closely

resembles a brown dwarf body. If it is an unnatural object - one that we may not be familiar with in terms of everyday celestial science, then all bets are off and no firm predictions can be made because this "unnatural object" is not following natural laws. And, at this point, we leave traditional science and orthodoxy behind.

Quoting directly from our work, "The most current working hypothesis we have to examine concerning the expected return date of Planet-X coursing through the solar system centers around the prime fact that X's extended orbit (approximately every 3,600 to 4,000 years)-first passing through the solar system in 'phase-one'-then back out again within 'phase-two'-now suggests that X's 'destructive orbit cycle' occurs in two separate/distinct cosmic events.

"This 'first-phase' begins with X's 'initial pass-through,' (possibly in 2009), then separated by approximately three years until its 'second-phase'-wherein "X" makes its 'second pass' through the solar system (expected in 2012). This second passage marks X's return leg back again into deep space beginning anew its 3,600 year trek through the heavens. Planet-X's last return visit likely coincided with the Hebrew exodus from Egypt under Moses and Pharaoh in 1447 B.C.E. roughly 3,454 years ago (just under 3,600 years). Did God somehow come to Moses' aid by staging a cosmic event that no one today truly understands?" The Book Of Exodus is very clear-simply read the facts...

Thanks to our new partners at Hawaii Pacific Teleport, The 'X' Zone is available in The Philippines and twenty Asian Nations including China, Hong Hong, Taiwan and Korea.

24 Is Planet-X Actually A Brown Dwarf?

Is Planet-X Actually A Brown Dwarf Star In Disguise?

Continued from Page 23

Our best-researched dates include late summer (September 2009) for X's first phase pass through and in early winter (December 2012) for X's second-phase pass through the solar system. Major earth changes will most likely occur during both phases of X's passage with the most damage resulting in a possible 'pole shift' (a tipping of Earth on its axis of rotation by 180 degrees) in X's second phase, December 2012. And, it's also possible that a complete Earthian 'pole shift' may not occur, however, our world may still suffer major planetary upheavals caused by X's periodic passage through the solar system.

Pole shifts (slippages of the Earth's crust) usually take place only 20% of the time. The brown dwarf's orbital period is approximately every 3,600-4,000 years-- the pole shifts may only take place on average once every 20,000 years. Also keep in mind that pole shifts can be massive, involving large changes in Earth's crustal placement or, at times can be minor, involving very slight changes in Earth's crustal positions. If large upheavals in the Earth's crust take place, the geophysical effects would be much greater than if only small changes occur. Large or small-any and all Earth Changing global movements are going to prove very dangerous, difficult and lethal to all those involved in these unpredictable and on controllable events.

In typical fashion, brown dwarfs are often referred to as 'failed stars' because they are under the mass limit (about 80 Jupiter masses, or 8% of the mass of the Sun) needed to spark the nuclear fusion of hydrogen to helium which supplies the energy for stars such as the Sun. Lacking any central energy source, typical brown dwarfs are intrinsically faint and draw their energy from a very gradual shrinkage or collapse over time. And younger brown dwarfs, much like younger stars, also have turbulent interiors. When combined with rapid rotation, this turbulent motion can lead to a tangled magnetic field that can heat their upper atmospheres, or coronas, to a few million degrees Celsius.

It is widely believed that brown dwarfs tend to burn out very quickly (after billions of years) and then are not easily distinguishable from very large planets. This then, could be one reason why Planet-X appears to be very hard to detect and may, in fact, be some form of an unnatural celestial object-especially if this mysterious object has been approaching the solar system from the southern quadrant of the sky (Orion region) and then emerging from behind the constant/ brilliant/blinding glare of the sun.

We received the following discourse from an amateur astronomer radio fan out there who intelligently questioned the technical dynamics of our working hypothesis. For purposes of this discussion, let's simply call him Mike. Mike's email began with, and we quote...

"Dear Dr. Rand...some strange object making its way into the inner solar system such as the proposed object Wormwood, a brown dwarf star, with a total orbital period of approximately 3,600-4,000 years-would normally take 40-60 years to travel from the orbit of Pluto to the inner Solar System. Given the network of Internet astronomers, that is a far too long time period for it to go totally undiscovered or undetected!"

"Even the tiny dark planetoid, Sedna, recently discovered several years ago by NASA, and which is twice as far out as Pluto, (yet smaller than Pluto as well), was eventually detected. Therefore anything else out there means that it (Wormwood) is not in a fixed/ known planetary or cometary orbit as recognized by modern-day science."

"This means it has to be a rogue object possibly outside of our common under-standing. Additionally, even a wandering rogue 'black hole' would, with things such as great asteroids, emit 'light' as they fell to their death. Even particles from the solar winds would give it an unholy glow. Jaysen, the bottom line here is that planets and other bodies have definite limitations in speed when they are in orbit around a star. Too fast, and its not in a fixed calculated orbit-so what do we have here?"

"Even comets, which often run quite close to the sun, are often visible for years in advance of their physical appearance in the inner solar system. Dr. Rand, you might want to check out the reports regarding the last approach of Haley's Comet. An inspection of Kepler's Laws of Motion are also very useful and they are THE fundamentals of under-standing planetary motion. If Planet-X is inbound as you believe it is-then there must be a more complicated explanation involved here or Planet-X is a rogue-unnatural celestial object-one which apparently defies the normal laws of celestial mechanics. More updates later and I certainly enjoyed your last radio visit on "X" Zone Radio."

Speaking of Haley's comet - it last

approached Earth in 1986 putting on a really great sky show and is due back again 76 years later in 2062. Comets are mostly made of frozen lumps of gas and rock and are much like dirty snowballs. Each time one passes near the Sun it's believed the comet itself becomes smaller and smaller. As a comet approaches the sun it begins to heat up. Comets have no light of their own and it's only when they are near the Sun do they get bright enough for us to physically see them. Haley's comet is just one of two thousand known comets roaming the heavens.

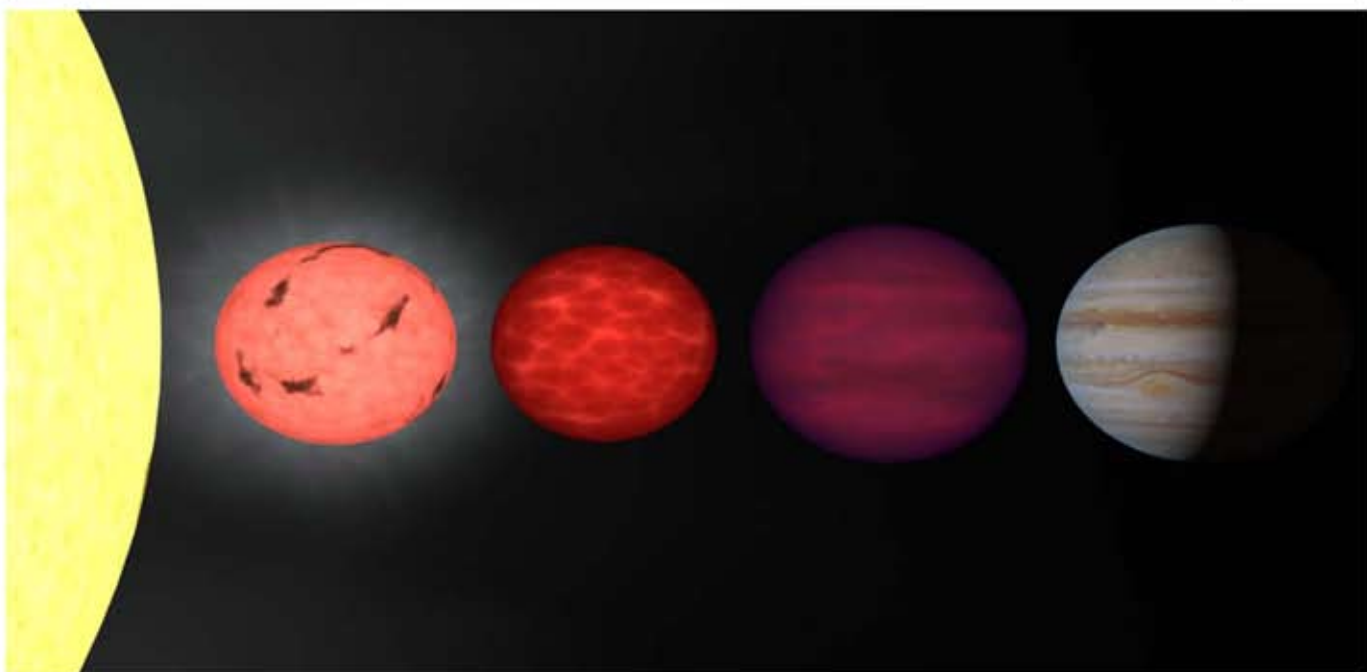

Going back to our original discussion-the following information regarding brown dwarf stars will help us further understand the scientific dynamics of their unique properties. Traditionally, brown dwarfs are sub-stellar objects with a mass below that necessary to maintain spontaneous hydrogen burning nuclear fusion reactions within their inner core. A typical brown dwarf occupies the mass range between that of a large gas planet and the lowest mass stars; this upper limit lies between 75 and 80 Jupiter masses.

Currently there is some scientific question as to what separates a brown dwarf from a giant gas planet at very low brown dwarf masses (~13 M_{J}), and whether brown dwarfs are required to have experienced fusion at some point in their ageless history. In any event those brown dwarfs heavier than (13 M_{J}) do in fact have deuterium (an isotope of hydrogen, having twice the mass of ordinary hydrogen) present, burning nuclear fusion reactions, and those heavier ones above (~65 M_{J}) also fuse lithium thus creating the potential for a working combustion formula expected for stars.

Is Planet-X Actually A Brown Dwarf Star In Disguise?

Continued from Page 24

A remarkable property of brown dwarfs is that they are all roughly the same radius, more or less the radius of Jupiter, and they vary by only 10-15% over the range of possible masses. This fact can make distinguishing brown dwarfs from planets rather difficult. In addition, many brown dwarfs undergo no fusion; those at the low end of the mass range (under 13 Jupiter masses) are never hot enough to fuse even deuterium, and even those at the high end of the mass range (over 60 Jupiter masses) cool quickly enough that they no longer undergo fusion after a time period on the order of 10-50 million years.

In general, brown dwarfs are still somewhat of a mystery as we haven't had the chance to study one up close! If Wormwood actually turns out to be a real-life brown dwarf star-scientific history will have been made-although the aftermath of its close passing Earth in the solar system may well prove to be quite costly in terms of global damage to Earth's continental land masses with her 6.7 billion human population centers.

In a subsequent email offering from "Mike" (our amateur astronomer radio fan) he writes:

"In my last discussion, Dr. Rand, we talked about the more conventional aspects of a brown dwarf, and so far I have left out some of the non-natural explanations for a possible Planet-X scenario! Now we step outside, very far outside of modern science, into the realm of wildest speculation-the "X -Zone" if you will-using of course-an appropriate sized grain of salt!

1) "A very large Planet-X, something similar to a brown dwarf (13-60 times the mass and gravity of Jupiter) would be/should be observable RIGHT NOW, unless, perhaps, it were in a parallel dimension.

Question?? Would two stars in close proximity across dimensions interact with each other?

2) "A large Planet-X could also be controlled by some intelligence let's say the Godhead factor. This is well outside of known foreseeable technologies and imagines beings who can move planets around like we move pleasure vehicles. At that point all bets are off, because then the Earth could very well be reduced to the equivalent status of an interplanetary test site for biology experiments. We Earthians might have the status of being 'intelligent pond scum.' Ouch! - Not a pleasant thought indeed!

3) "It is possible that these scenarios are in fact residual memories of some sort of far removed 'past events.' For example, many maps of the Earth showing how it is supposed to change after "Earth Changes," are very similar to a map of the Earth at the time of the great Dinosaurs, just before the giant asteroid smashed into the Gulf of Mexico/Yucatan region (estimated around 65-million years ago) and totally wiped them out. Could this be another example of a contrived/planned celestial event by a Godhead entity/super advanced being or race of beings? This thought supports the idea of some sort of a Earth memory mechanism.

4) "About a mysterious change in Solar System dynamics at the end of the Dinosaur age-something passing through the solar system could have disrupted the stable orbits of the planets. Thus-a hidden memory of something bad happening at the end of the age of Dinosaurs-possible based upon a change in Solar System Dynamics from a passing visitor. So I leave it to your speculation about the mechanism of such a memory. Does planet Earth have cosmic memories? Is she alive with perception / consciousness / behavior patterns /motives and a mysterious cosmic agenda?

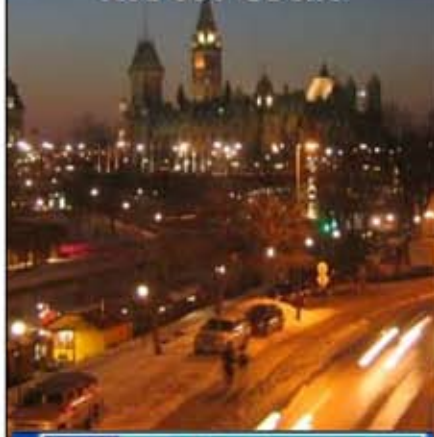

"As I said, Dr. Rand, this is all 'very far outside' of modern science-into the realm of wildest possible speculation-remember use an appropriate size grain of salt. Each of the above four scenarios would certainly make for a good installment of a modern-times Twilight Zone episode. -Cheers, Mike."

In closing our discussion of what we believe brown dwarfs are and what they are not-and further if Planet-X is, in fact, what we hold to be a brown dwarf body (the Biblical death star-Wormwood), all speculations, theories and conclusions as to what is scientifically provable about them/it -is, at best, almost impossible to establish beyond a reasonable doubt.

Is Planet-X Actually A Brown Dwarf Star In Disguise?

Continued from Page 25

The reasons are many and varied-the available information about this one particular brown dwarf (popularly called Planet-X) is, however, one of the most popular subjects explored on the Internet today. One such informational site we highly recommend is: <http://www.detailshere.com/niburu.htm>. Within this site you will find a fascinating number of additional/important Internet links that will completely mesmerize your thinking processes and propel you into wanting to know more about everything "Planet-X" and beyond to what the Maya called "the end-of-time date"-2012.

To quote the Host and Executive Producer of THE 'X' ZONE RADIO AND TV SHOW:

"Working together as one, we can solve the mysteries of life." - Rob McConnell, 2005

For all of you who don't know about our new book, *The Return Of Planet-X-Mankind's Ongoing Legacy With A Brown Dwarf Star*, we'd like you to check out our website: www.returnofplanet-x.com

Books can be ordered from: www.atlasbooks.com/marktplc/01805/htm or by calling 1-800-247-6553 or 1-800-Book Log.

For a signed copy write to Futureworld Publishing International, LLC P O Box 141, Horn Lake, MS 38637 Or email us at skipper.2012@hotmail.com

Thank you for the opportunity of sharing with you our thoughts, impressions and information about the subject of brown dwarf stars-especially this one-Wormwood. If we are correct about Wormwood's incoming passage-first in fall 2009 and then its second passage in early winter 2012, planet Earth will surely experience what could be one of the most dynamic/ exciting/dangerous/Earth changing events in mankind's modern-day history and his destiny in the early 21st century.

Our book and its timely message is not meant to frighten, scare or demoralize you-but rather to inform/enlighten/prepare everyone for whatever natural disaster surprises old Mother Nature and the infinite cosmos may have in store for us in the very near future.

We believe that forewarned is forearmed-and any measure of self-preparedness is far better than what recently happened to the beautiful city of New Orleans and the Gulf Coast following hurricanes Katrina and Rita in fall 2005. Remember-Mother Nature gives no quarter-takes no prisoners-and remains uncontrollable! Unless we're dead wrong-it's going to get a lot worse!

And if Planet-X should not prove to be the problem we believe it could be-all the better for the rest of us-let's hope so and pray on it-after all, each of us is a responsible human being-with each one of us being our own "Reality Engineer" born in the fabric of life here on Earth.

Quoting from page 307 in our book: "Whatever fate awaits us-Mother Earth is about to reveal her secrets regarding the reality of Planet-X coming in 2009/2012. One thing is absolutely certain!! Something 'BIG' is radically wrong with the normal functioning of planet Earth's global operating systems and mankind's ability to either control or understand these cosmic forces/dynamics... And time we believe...is rapidly running out in the landscape of human life as we are presently living it here on the Earth in 2007."

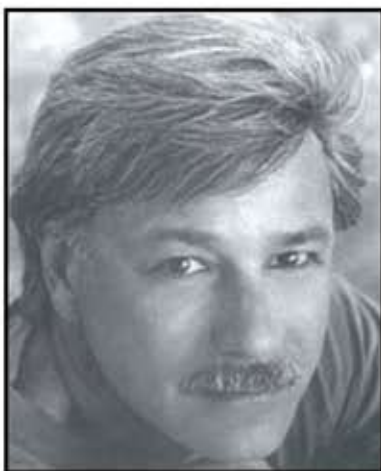

Thanks again and God's blessings to each of us...

Sincerely, Jaysen Q. Rand, Ph.D.

- About -

Dr. Jaysen Q. Rand, Author

"Reality, as perceived by each human being, is the sum total of their cumulative life experiences — moment to moment"

Dr. Rand received his Honorary Ph.D. in the field of Energyinformative Sciences, from the Academy of Energyinformative Sciences, conducted with Moscow University, Russia.

His contributions in the study and pursuit of Extraterrestrial Communications, research into UFO phenomena, cosmology and his representing the United States at The First World UFO Congress (Tucson, AZ - 1991) - earned him distinctive recognition and his Doctorate from their Russian Academy of Sciences on December 18, 1992 in Moscow.

Jaysen Rand also attended the University of Illinois (Chicago Campus), Palmer School of Business, the National College of Chiropractic and earned three U.S. Army (MOS) school diplomas from (1963 - 1966).

He's also a gold/platinum, multi-award winning music producer / recording artist / songwriter / publisher and recording studio manager being a music A&R executive with real hands-on corporate industry experience.

As a Grammy nominated record producer, Rand received significant industry recognition from RIAA, NARAS, NATRA, Billboard, Record World and Cashbox

magazines, a Readers Digest article on hot dance music, a 60 -Minutes TV disco dance special, and 3 Dick Clark LA Music Award nominations earning him 35 gold and platinum records. Dr. Rand now resides in Horn Lake, MS.

In support of Doctor Rand's creative writing projects based on his Planet-X entertainment concepts, he's written three Teleplays all designed at TV Pilots for weekly series. He believes that these exciting Planet-X adventure themes would easily translate into major contemporary film studio projects followed by several weekly TV series.

The author is currently completing a 4-CD set of demo sound tracks designed for his writing projects based upon Planet-X and are currently available upon request for audition and production purposes.

Jaysen Q Rand has authored three books including *The Extraterrestrial Hypothesis*, *The Cosmic Blueprint For After* and *The Reality Engineer*. Dr. Rand travels widely establishing close ties with his fellow UFOlogists and paranormal researchers especially in Russia where Rand has close ties with Lt. Col. Marina Popovich and her former husband, Army General Pavel Popovich, who both live in Moscow. Marina and Pavel remain active in the UFO field representing Russia. []
